

Bring the power of MVS/QuickRef to your desktop!

QuickRef for Windows (QRWin) delivers the same rich knowledgebase as our industry-leading mainframe product - to your desktop! With over 100 million lines of reference material from over 70 software vendors, QRWin places the information you need to quickly solve problems at your fingertips.

QRWin is a standard Microsoft Windows® application that runs on x86-based desktop computers. Like MVS/QuickRef, QRWin organizes the over 3,500 messages, codes and reference manuals in an easy-to-use structure including vendors, products and categories.

QRWin also provides powerful search capabilities that let you find the specific information you need to solve problems or accelerate application development.

With history and textmarks, you can quickly return to previously viewed items or save items for future reference - QRWin preserves application state across sessions!

Integrated features such as Copy, Print, and Save allow you to capture critical information for later use - or you can easily share it with your coworkers. Using intuitive Next and Previous action buttons, you can easily navigate through any of the over 450 reference manuals in the QuickRef knowledgebase.

Like MVS/QuickRef, QRWin can help you solve problems faster, control your costs, and keep your customers happy!
